

CP Use case

Persona

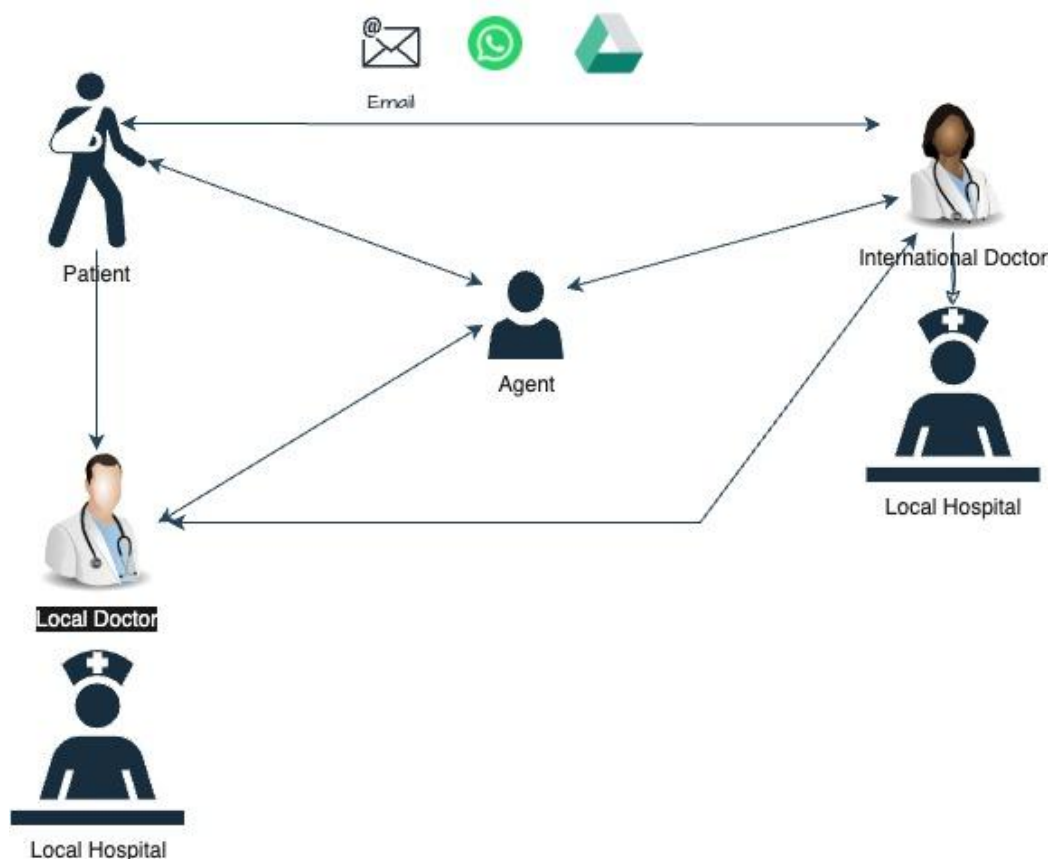

1. **Patient** : Person / family who needs surgery or medical care that is either not available in their country or is not accessible due insurance / cost or any other limitation.
2. **Local Doctor / Medical consultant** : Reviews the patients case documents and based on the context of the case refer the patient to an international Doctor / Hospital.
3. **International Doctor / Hospital**: Reviews the patients case documents and plans the care plan accordingly. Postoperative care communicates with Local Doctor / Local medical care provider.
4. **Agent** : Agents for commission will provide Patients with logistical and communication support to connect to one or more international doctors and hospitals.

Common Medical Reports

1. Lab reports
2. X-rays
